# MasterStak Robotic Palletizing System

The MasterStak Positioning Robot translates and rotates bundles into an unlimited number of layer configurations. Servo controlled positioning provides push-button size and layering change overs.

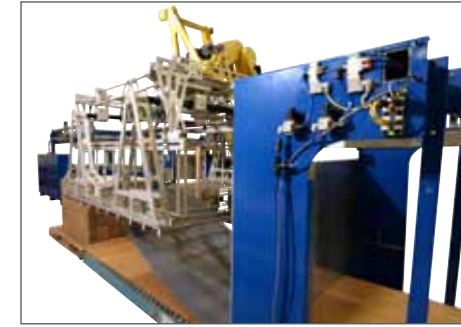

The MasterStak Palletizing Robot straightens and stacks layers to form the most stable load configuration.

Optional automated tie sheet placement between desired layers.

A picked layer with tie sheet being positioned to form a load.

Optional automated dunnage sheet placement.

We invite you to explore what we have to offer.

Automatän is an international company that supplies innovative graphics-related equipment to the corrugated, folding carton, litho and flexo printing industries around the world. Our focus is adding to our customers' success by improving packaging graphics--both quality and efficiency.

## System Highlights

- 25+ Bundles per minute
- Completely automated system including all dimensions of size change
- Stores jobs for quick setups
- Decreases operator fatigue and injuries
- Accepts banded or un-banded bundles
- Minimal floor space requirements

## Summary

- Safe
- Fast
- Small Footprint
- Efficient
- Profitable
